Aldom refrigerated truck - print plan for 40 trucks

125 mm kit | one printer, approx. 260 printer-hours (about 11 days running continuously) | 23 plates

#	Plate	Nozzle	Needed	Per plate	Plates	Hours per plate	Total hours
1	Box (white / red / black / grey)	0.2 mm	40	10	4	~42	166
2	Roof panel (white / red / black)	0.2 mm	40	12	4	~5	21
3	Rear door (white / red)	0.2 mm	40	40	1	~14	14
4	Fridge unit (white / black)	0.2 mm	40	40	1	~3	3
5	Chassis (black, tree supports)	0.4 mm	40	6	7	~5	35
6	Cab (white)	0.4 mm	40	20	2	~7	14
7	Windscreen glass (black)	0.4 mm	40	40	1	~0.6	0.6
8	Side glass (black)	0.4 mm	80	80	1	~0.5	0.5
9	Front wheels (black / silver)	0.4 mm	80	80	1	~2.5	2.5
10	Rear wheels (black / silver)	0.4 mm	160	160	1	~4.7	4.7
	Total				**23**		**approx. 260**

Order: print plates 1-4 with the 0.2 mm nozzle (fine artwork), then swap the hotend once and print plates 5-10 with the 0.4 mm nozzle.
Filament: about 2.5 kg of plastic for the 40 trucks, plus purge waste from colour changes (small, because every plate is full).
Plates 7 and 8 (black glass) can be combined into one plate, giving 22 plates in total.
Estimates: hours are calculated from the model geometry (3 walls, 15% infill) and expected print speeds; allow about +/-30%. Slice one plate of each type in Bambu Studio for exact figures.
Assumptions: 256 x 256 mm print bed with an AMS; times include about 10 minutes per plate for heat-up, levelling and plate change.
Per truck: 1 each of box, cab, chassis, rear door, roof panel, fridge unit and windscreen glass; 2 side glasses; 2 front and 4 rear wheels; 2 dowels cut from 1.75 mm filament (about 6 mm long).
